EDUCATION

University of Calgary — B.Sc. Computer Science

Expected 2029

Dean's List (2025–2026) · \$10,000+ in Scholarships & Grants · Gauss Mathematics Contest Excellence Award (University of Waterloo)

Coursework: Object-Oriented Programming, Data Structures & Algorithms, File I/O, GUI Development

Transferred from Mount Royal University — B.Sc. Computer Information Systems (Dean's List)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS

Concepts: OOP & Inheritance, Data Structures (Stack/Queue/LinkedList), File I/O, Event-Driven Programming, Hardware Integration

Tools & Platforms: Git/GitHub, Java Swing, Phidgets SDK, IntelliJ IDEA, WordPress/PHP

PROJECTS

HVAC Express Production Website

JavaScript · HTML/CSS · WordPress/PHP

- Design, build, and maintain a live, revenue-generating business site (calgaryhvacexpress.ca) end-to-end — migrated a fragmented CSS system to a token-based design architecture and configured multi-domain hosting on Hostinger.
- Found and remediated a security vulnerability (a hardcoded credential committed to source), refactoring credential handling to environment-based config.
- Built and executed an SEO strategy (keyword research, competitor analysis, Search Console integration) tied directly to inbound lead volume.

Autonomous Obstacle-Avoiding Rover

Java · Phidgets SDK · CS30 Capstone

- Programmed a wireless rover to autonomously detect and avoid obstacles using independent left/right DC motor control and sonar-based distance sensing.
- Designed a class hierarchy separating movement, sensing, acceleration, and challenge logic — applying OOP to a hardware control problem rather than a pure-software exercise.
- Implemented configurable acceleration modes and closed-loop obstacle response.

Data Structures Suite

Java — implemented from scratch, no built-in library classes

- Built Stack, Queue, and LinkedList implementations from first principles, including a ReverseList variant, working directly with node traversal and memory management instead of java.util.

Additional Coursework Projects

Java

- OOP Banking System — abstract Account base class with Personal/Business subclasses, applying abstraction, encapsulation, inheritance, and polymorphism across a 4-class hierarchy.
- File I/O Suite — word-frequency counter, find-and-replace tool, and a transaction-statement generator using BufferedReader/BufferedWriter.

EXPERIENCE

Technical Lead & Sales Associate, HVAC Express

Mar 2024 – Present

- Own technical infrastructure for a family-run Calgary HVAC company — website, hosting, and lead-generation systems (see Projects).
- Manage direct client sales in a fast-paced, commission-driven environment — translating technical service specs into terms non-technical customers can act on.

Learning Peer (Tutor), Mount Royal University

Feb 2026 – May 2026

- Provided one-on-one academic support in technical coursework, developing materials that improved student comprehension.

ACTIVITIES

WayBionic Robotics, University of Calgary — Member

August 2026 – Present

- Contributing to a ROS2-based remote-teleoperation surgical arm project.

AWARDS & RECOGNITION

Dean's List — University of Calgary & Mount Royal University · \$10,000+ in Scholarships & Grants · Gauss Mathematics Contest Excellence Award (University of Waterloo) · Community Service Recognition Award
